Audience

Engineering leaders, CTOs, VP Engineering,
People leaders

Format

Keynotes: 45–60 min
Workshops: Half-day or full-day

Signature Talks

50 First Dates with AI

Current AI memory architecture is anterograde amnesia — and we’re all Henry Roth, recording VHS tapes every night so our agent can wake up functional tomorrow. This talk covers why your AI’s “memory” is actually just replay, not learning, and the three-layer architecture that actually compounds.

From Strip-Mining to Cultivation

The shift from extraction to cultivation in AI-era teams. Why throughput optimization is killing your soil health. The most successful AI teams aren’t the ones with the best models — they’re the ones who stopped strip-mining their humans and started cultivating them.

The Soil Under Your Team

Diagnose what’s actually depleted before you fertilize. A diagnostic framework for team health. Most team interventions fail because they prescribe before diagnosing. This workshop gives you a cultivation assessment framework that finds what’s actually depleted.

What People Say

“Scott has a rare ability to diagnose team dynamics quickly and prescribe actionable solutions. His cultivation framework changed how we think about AI adoption.”

— Engineering Leader, Tech Company
